

upset_plot

Instead of venn diagram do upset plot for more than 6-way comparison

```
library(UpSetR)

upset_file <- read.csv("upset_input.csv",row.names = 1)

upset(upset_file,sets = c("Epigenetics", "RS1","RS2","RS3","RS4","RS5"),
      keep.order = TRUE, sets.bar.color=c("purple","green","red","pink","orange","black"),
      matrix.color="black",main.bar.color="blue")
```
